

MONARCH BUSINESS PLATFORM

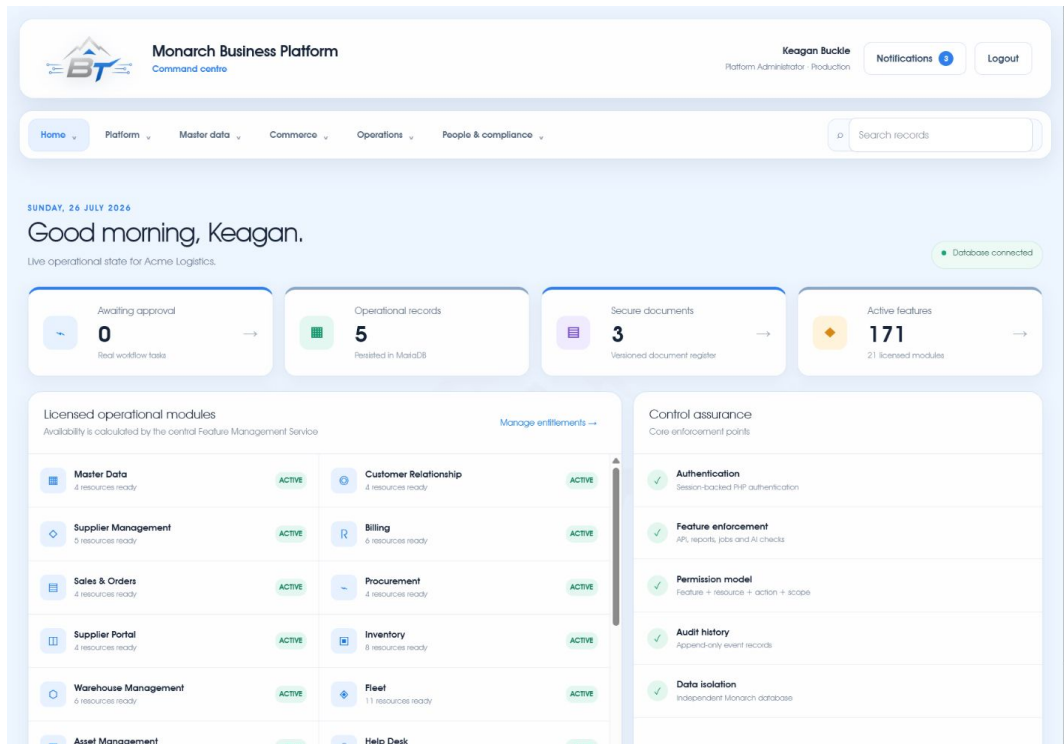

One operating system for your entire business.

A secure, branch-aware business platform that connects sales, procurement, inventory, people, workflows, documents and reporting in one controlled environment.

Built and supported by Buckle Technologies

Control the whole operation from one place.

Monarch gives leaders a live view of the business while giving every team a focused workspace. Features, permissions and data are controlled per branch, so the platform can grow from one site to many without losing accountability.

Branch-scoped by design

Users select an authorised branch and every record, report, workflow and search remains correctly isolated.

Live operational visibility

Dashboards surface approvals, documents, active modules, database health and control assurance.

From product master to paid invoice.

Monarch supports itemised commercial documents with quantities, pricing, discounts, tax and server-verified totals. Approved quotations can convert into linked sales orders, while procurement and receiving maintain a complete operational trail.

The screenshot displays the Monarch Business Platform interface. The top navigation bar includes the Monarch logo, company name 'Acme Logistics', active branch 'Johannesburg Head Office', a search bar, notifications, and a logout button. The left sidebar lists various workspaces and platform features. The main content area shows the 'New products & services record' form, which is divided into several tabs: Product identity, Classification, Units & pricing, Stock controls, Replenishment, Status, Documents (0), and Audit log. The 'Product identity' tab is active, showing fields for SKU / barcode, Stock code, Alternate barcodes, Product / service name, and Short description. The form is designed for creating new products and services, with a 'Create draft' button at the top right.

Sales

Customers, quotations, sales orders, invoices, credit and debit notes, returns and point-of-sale transactions.

Procurement

Suppliers, purchase requests, RFQs, purchase orders, goods receipts and controlled banking changes.

Inventory

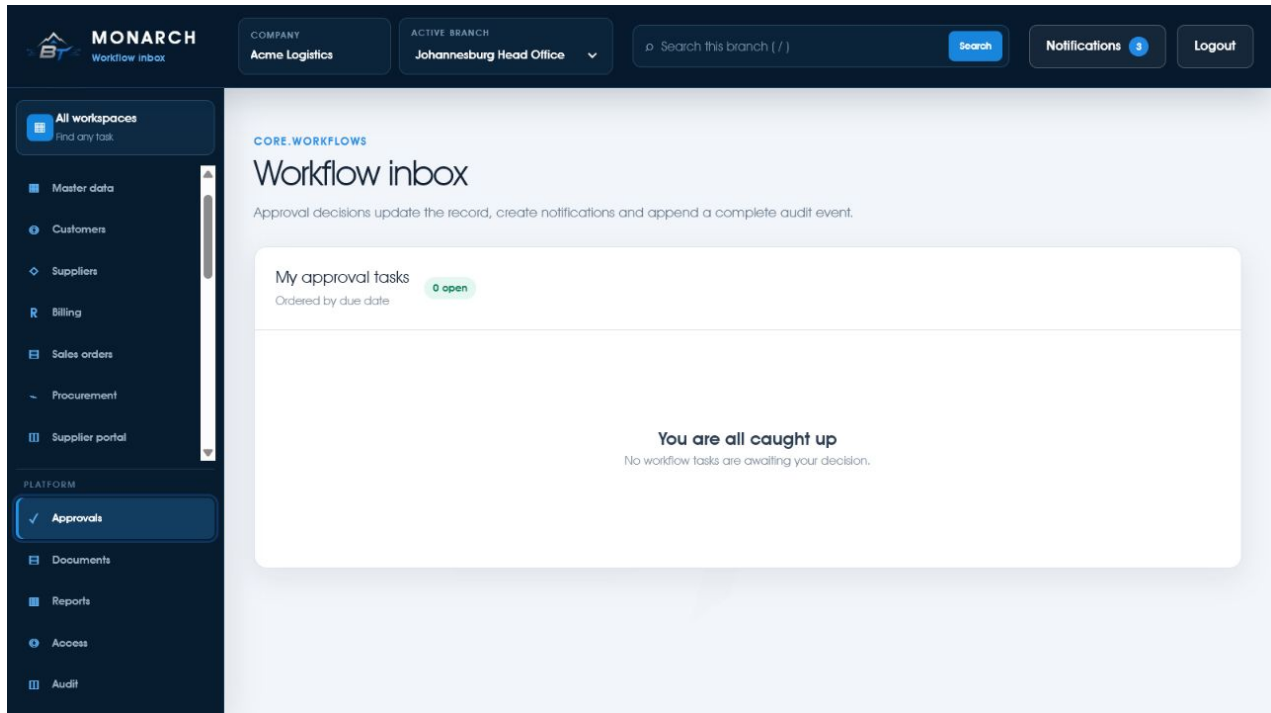

SKU and barcode controls, serials, batches, expiry dates, movements, balances and put-away tasks.

Assets and fleet

Asset registers, vehicle records, fuel calculations, meter validation and diesel-tank controls.

Every approval, task and action accounted for.

Shared workflows keep work moving between teams. Permission checks combine feature, resource, action and scope, while the append-only audit ledger creates a reliable history of operational activity.

Workflow inbox

Central tasks, notifications, approvals and lifecycle actions give users a clear view of what needs attention.

Secure document centre

Versioned documents, content hashing, duplicate detection and S3-compatible object storage.

Roles and permissions

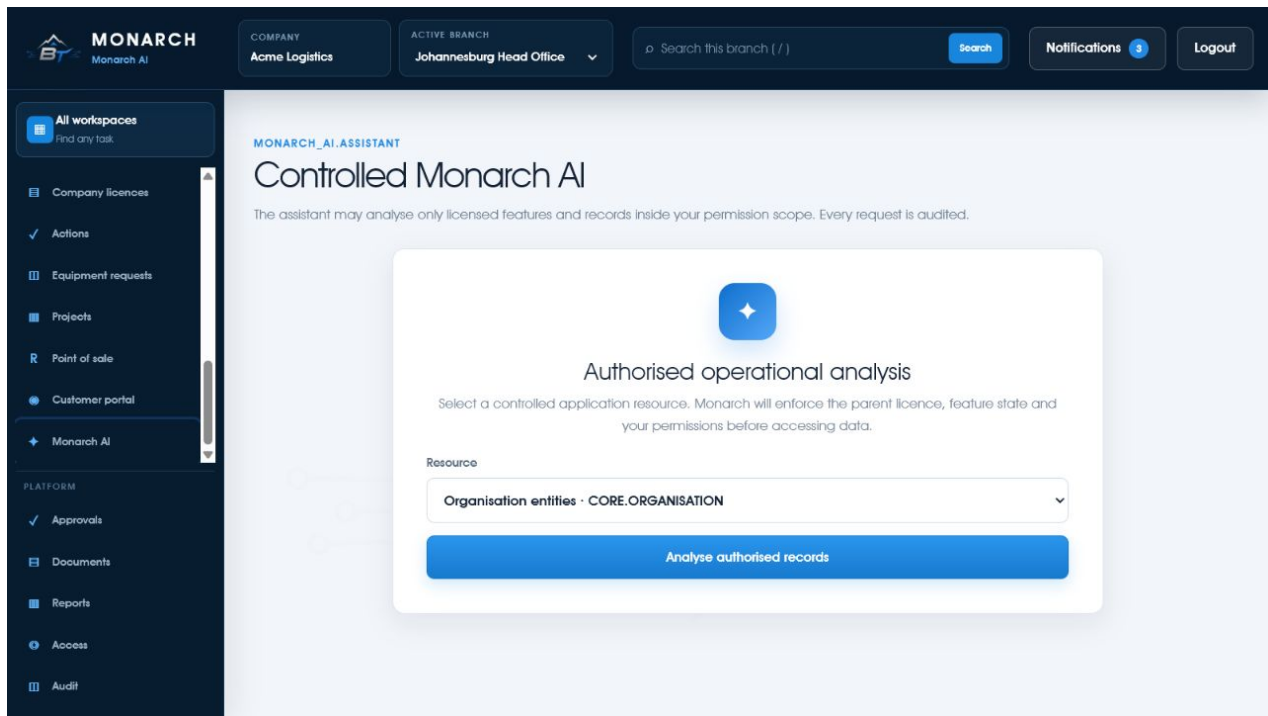

Server-side enforcement for users, roles, features, resources, actions and branch scope.

Audit history

Protected, append-only event history supports traceability and stronger operational governance.

Answers without the spreadsheet chase.

Scope-aware reporting and global search give authorised users fast access to operational facts. Monarch AI adds controlled analytics through the same application permissions, keeping intelligence inside the platform's governance model.

Monarch AI

Authorised analytics for operational questions, with access governed through platform resources and permissions.

Shared reporting

Branch-aware dashboards and reports across commerce, operations, people, inventory and fleet.

Global search

Fast, scope-aware discovery across shared records without exposing data from unauthorised branches.

Built to extend

A modular entitlement model allows features and dependencies to be enabled as the business grows.

READY TO SEE MONARCH IN YOUR BUSINESS?

Buckle Technologies can tailor the platform, configure the right modules, migrate your data and support your team from rollout onwards.
